One group of lizards living in Australia has blue tongues. These lizards are called blue-tongued skinks. They are smooth-scaled reptiles with large heads, long bodies, and very short legs. The most important job of them is searching for food. Using their blue tongues to 'smell', they can find their food. Unlike most other lizards, this reptile moves too slowly to outrun most predators. If it is grabbed by a predator from behind, it can make an escape by allowing its own tail to fall off. Later, a new tail will regenerate, or grow back.

Questions:

1. How does blue-tongued skink look?
2. How does it search for its food?
3. Which quality does make it different from other lizards?
4. How can it make an escape?
5. What is so special about its tail?
